REVIEW SPACES

Installation guide

Compatibility build for Photoshop without Creative Cloud

READ BEFORE INSTALLING

Only use this build if your Photoshop is NOT connected to Adobe Creative Cloud.

This build uses a less capable user interface (UI) technology than our standard build. **Visual artifacts and interface display issues are expected.**

Photoshop connected to Creative Cloud? Use the standard Review Spaces build through Adobe Creative Cloud instead.

Before you start

Extract the ZIP into a folder and keep all its files together. The installer needs the included **.ccx plugin file** in the same folder. Leave the .ccx file as it is; the installer handles it for you.

Save your work and close Photoshop completely before running either installer.

File extensions may be hidden. Look for Windows or MacOS in the installer name.

Windows

Install-ReviewSpaces-Windows.bat

1. Double-click **Install-ReviewSpaces-Windows** in the extracted folder.
2. If Windows asks for permission, allow the installer to run.
3. Wait for **"Review Spaces installed successfully."** Then press **any key**.
4. Open Photoshop and find Review Spaces in the **Plugins** menu.

macOS

Install-ReviewSpaces-MacOS.command

1. Double-click **Install-ReviewSpaces-MacOS** in the extracted folder.
2. If macOS asks for permission, allow the installer to run.
3. Wait for **"Review Spaces installed successfully."** Then press **Return**.
4. Open Photoshop and find Review Spaces in the **Plugins** menu.

If installation fails, email a screenshot of the installer message to **support@reviewspaces.io**.
